Evan L. Lopez

Los Angeles, California
(424) 903-5623
evanllopez@protonmail.com

Private-Security and Administrative specialist turned Software Engineer with experience in risk-assessment and security protocols in critical environments.

EXPERIENCE

UCLA Health, Los Angeles, CA — *Systems Administrative Technician*

JULY 2022 - JULY 2024

- Utilized software systems (Epic, CareConnect) to allocate patients, nurses and surgeons to appropriate operation rooms/medical bays based on projected operation details.
- Processed/finalized medical records in accordance with HIPAA standards, including paperwork for transplant organs from donors.
- Attention to detail was critical, as mistakes could derail nurses'/surgeons' work, risking fatal or near fatal consequences for patients.

2nd Battalion / 23rd Marines, San Bruno, CA — *Infantry Rifleman (MOS 0311)*

JULY 2012 - JULY 2016

- Collaborated in four-person operational teams, with Marine Special Operations Command (MARSOC) operatives.
- Planned and conducted nighttime tactical movements and patrols, maintaining unit cohesion and operational security in zero-visibility conditions.
- DOD Secret Clearance (Inactive, eligible for reinstatement)

Marine Wing Support Squadron 473, Miramar, California — *Expeditionary Airfield Systems Technician (MOS 0711)*

JULY 2010 - JULY 2012

- Installed, maintained, and repaired mobile arresting gear, AM-2 airfield matting, and portable lighting systems supporting expeditionary aircraft operations.
- Performed preventive maintenance and troubleshooting on hydraulic, electrical, and mechanical systems critical to flight-line safety, in accordance with NATOPS standards.

EDUCATION

California State University, Northridge, Northridge, CA — *B.S. Computer Science*

January 2025 - May 2027

Completed coursework in Advanced Data Structures, Software Engineering, Discrete Structures, and Computer Assembly / Architecture.

SKILLS

Languages: C, Python, Java, JavaScript

Frameworks: React, Node.js

Tools: Github, VS Code

PROJECTS

Sonus — *AI Music Composition Tool*

Developed an AI-powered chord-prediction model that enhances music composition workflow, utilizing multiple models [N-Gram / Markov / LSTM] to analyze over 666,000 user-generated songs with chord progressions. Coordinated with project members on JIRA, while sourcing data from the Chordinomicon database, with much of the development done on VS Studio on Python.
