Evan L. Lopez

Los Angeles, California
(424) 903-5623
evanllopez@protonmail.com

Private-Security and Administrative specialist turned Software Engineer with experience in risk-assessment and security protocols in critical environments.

EDUCATION

California State University, Northridge, Northridge, CA — *B.S. Computer Science*

January 2025 - May 2027

Completed coursework in Advanced Data Structures, Software Engineering, Discrete Structures, and Computer Assembly / Architecture.

EXPERIENCE

Private Security Contractor, Los Angeles, California — *Self Employed*

JULY 2010 - JULY 2012

- Performed continuous risk assessment across multiple international environments, prioritizing threats and allocating limited resources
- Repurposed off-the-shelf IoT tracking devices to build a remote monitoring solution for an at-risk individual, replacing manual coverage with real-time location data and cutting staffing needs by 66%.

UCLA Health, Los Angeles, CA — *Systems Administrative Technician*

JULY 2022 - JULY 2024

- Coordinated real-time scheduling and dispatch of up to 20 patients and 27 clinicians across 20 operating rooms and medical bays, using Epic and CareConnect to match each case to the right room, staff, and equipment based on procedure type, anesthesia requirements, and room availability.
- Redesigned the operating room network layout, cutting patient record retrieval and processing time by 30% across 20 ORs and medical bays.
- Utilized military OPSEC training to process/finalize medical records in accordance with HIPAA standards, including paperwork for transplant organs from donors.

2nd Battalion / 23rd Marines, San Bruno, CA — *Infantry Rifleman (MOS 0311)*

JULY 2012 - JULY 2016

- Rearranged a squad of 12 marines during live-fire maneuvers, increasing elemental mobility and field-of-view by 100%.
- Planned and conducted nighttime tactical movements and patrols, maintaining unit cohesion and operational security in zero-visibility conditions.
- DOD Secret Clearance (Inactive, eligible for reinstatement)

PROJECTS

Sonus — *AI Music Composition Tool*

Developed an AI-powered chord-prediction model that enhances music composition workflow, utilizing multiple models [N-Gram / Markov / LSTM] to analyze over 666,000 user-generated songs with chord progressions. Sourced training data from Chordinomicon database.

SKILLS

Languages: C, Python, Java, JavaScript

Operating Systems: Fedora, Graphene

Tools: Github, VS Code
